# Targeted & Effective Treatment: Superior Results

**The most powerful laser within a 60-mile radius!**

For chronic or more advanced foot and nail conditions such as fungal nails, verrucae, chronic corns, scarring, foot pain and spider veins, most standard chiropody procedures sometimes only manage the symptoms rather than treating the cause. But, with the huge advances in laser technology, our expert podiatry team at Forest Hill Practice can now treat conditions quickly, effectively and, in some cases, painlessly with the state-of-the-art S30 PODYLAS™ laser.

## Fungal Nails (Onychomycosis)

Fungal nail infections can affect both the hands & feet. Untreated they can become unsightly & cause pain and discomfort. The S30 PODYLAS™ laser produces a gentle targeted,

thermal effect that penetrates into the nail bed, killing the bacteria or fungi that cause the infection, without damaging surrounding healthy tissue.

With the ability to treat up to ten digits in as little as 30 minutes with no pain (the worst any of our clients have felt is a small “pricking” sensation) and none of the side-effects of topical products or medication, it far surpasses “traditional” fungal nail treatments in terms of speed, comfort & results.

## Verrucae

The tell-tale black marks of verrucae are actually blood vessels that feed the verrucae and enable them to persist. The S30 PODYLAS™ laser targets the blood vessels with heat – while causing no damage to the surrounding tissue – to cut off the blood supply that “feeds” the verrucae, resulting in a fast, more permanent solution to the problem.

## How It Works

The S30 PODYLAS™ advanced system uses thermal laser technology to target the problem area. By penetrating the tissue it treats the problem gently, effectively & quickly without causing damage to the healthy surrounding tissue.

## Corns, Lesions & Ulcers

Conditions such as long-standing or deep corns, ulcers and lesions can cause pain, discomfort and require regular attention with “traditional” treatments. With targeted laser we penetrate deeper into the tissue, with no damage to the surrounding areas to alleviate pain & discomfort, quickly and comfortably.

## Spider Veins, Foot Pain & More...

Our experts podiatrists treat a plethora of conditions with this state-of-the-art laser. These include spider veins, scarring, foot pain & Plantar Fasciitis.

**For more information about the full range of laser treatments we offer, call Forest Hill Practice on 01829 731360.**

## Laser FAQs

**Is it Safe? Yes. It's totally safe with no side-effects.**

**How Long Does it Take? Laser is quick & convenient. Up to 10 digits (toes/fingers) can be treated in as little as 30 minutes.**

**Are there After-Effects? No. With no recovery time you can carry on with every day life as soon as you leave clinic.**
